National Security Agency

2017 Research Directorate Award

1st Place

The National Security Research Directorate Award at the Intel International Science and Engineering Fair recognizes cybersecurity research with scientific rigor, clarity of presentation, and global impact. It is to encourage more new scientists to think about cybersecurity and its critical aspects across multiple disciplines. As a scientist, you are helping to fill the critical shortfall of cybersecurity professionals and assure freedom and trust on the Internet.

Dr. Deborah Frincke, NSA Research Director — May 12, 2017
